CERTAINTY DELIVERED

# Capability Statement and Services.

**Helia EHS - Australia's leading environmental  
and safety consultants.**

# Core competencies you can count on.

We're a team of highly qualified environmental health and safety consultants led by directors with extensive experience across the EHS spectrum.

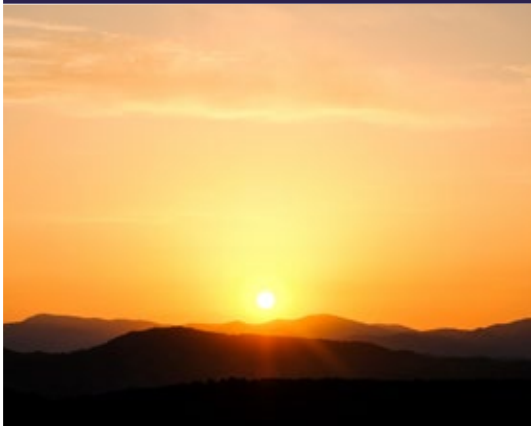

Helia EHS is Australian owned, with a reputation for getting it right for both public and private sectors organisations.

Our success stems from excellent client relationships and providing innovative, efficient solutions on time and within budget.

# Key services we provide

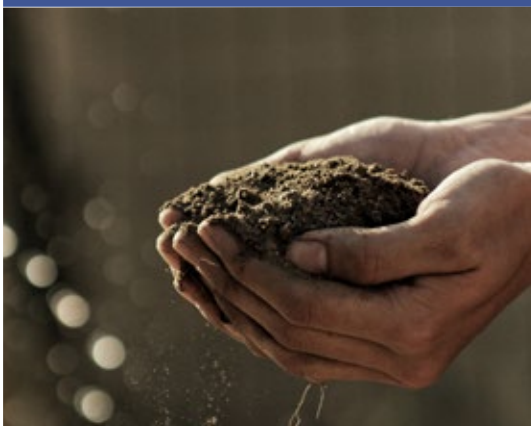

**ENVIRONMENTAL**

**HEALTH, SAFETY  
& OCCUPATIONAL  
HYGIENE**

**CONTAMINATED  
LAND MANAGEMENT  
SOLUTIONS**

**ASBESTOS  
& HAZARDOUS  
MATERIALS**

# 1. Environmental

Helia EHS provides a range of specialist advice for a range of industries and workplaces including:

## **Compliance and Approvals.**

Helping you meet your environment compliance obligations.

## **Environmental Noise.**

Small to large-scale environmental projects covering noise assessment, noise monitoring, management plans and construction vibration.

## **Environmental (boundary) Dust.**

From small to large-scale environmental projects for deposition or ambient dust assessment including results interpretation, dust monitoring and management plans.

## **EHS Specialist Services.**

Assistance with legal compliance audits, due diligence auditing and development of management plans.

## **Air Quality Impact Assessments.**

Helia EHS can assist in various levels of assessment covering air dispersion modelling and interpretation to support EPA applications.

## **Reverse Amenity Assessments.**

Environmental impact vulnerability assessments are often required for sensitive use developments such as childcare. We can assist with various types of desktop assessments covering air dispersion modelling and human health risk assessment.

## **Environmental, health and safety management systems, advisory and assistance.**

Helia EHS can assist you to prepare for various third-party certification audits. These include the preparation of policies, risk registers, procedures and more, plus audit conducting training.

## 1. Environmental

### Navigating environmental legislation

No organisation can afford to ignore the growing complexity of environmental legislation and compliance.

#### **Compliance Risk and Review.**

Australian legislation places increased responsibility on businesses to proactively manage their environmental risks to avoid harming public health and the environment.

#### **Environmental Duty.**

We can help you fulfil your obligation to proactively identify and manage environmental risk.

**EPA Notices Advisory and Consulting.** Helia EHS provides advisory and consulting services regarding all EPA notices.

### Mining, mergers and more

Our consultants are both specialists and generalists. This allows us to form the right team for your needs.

#### **Mining Services.**

We offer a range of capabilities covering above and below ground mining and other extractive industries such as quarrying.

#### **Mergers and Acquisitions.**

Mergers and acquisitions bring new opportunities but can also open you to environmental liability – where you can be held responsible for any environmental damage caused by your operations or assets. We'll help you navigate any complex environmental liability issues – ensuring you're protected from potential risks.

## 2. Health, Safety & Occupational Hygiene

Our deep, industry specific knowledge guides us to select the correct consultants for your health, safety or occupational hygiene project.

### Helia EHS's consultants work to:

- Protect the health and safety of workers
- Ensure organisational compliance with a changing regulatory environment
- Provide a service that ensures adaptive management
- Provide assessments that are risk based and recommendations that reduce risk to protect workers
- Include clear communication at every stage.

## 2. Health, Safety & Occupational Hygiene

### Strategy

#### **Know where you stand – and where you're going.**

Our Occupational hygienists and safety professionals can assist with understanding and assessing hazardous atmospheres, confined spaces, plant and equipment safety, manual handling and ergonomic risks.

- Occupational Health and Hygiene policies, procedures, and plans
- Risk Management (identification, assessment, evaluation, and control)
- Health risk assessment (new and existing processes)
- Exposure control and improvement ensuring you're protected from potential risks.

### Program Management & Support

#### **Stay on top of potential EH & OH issues.**

- Baseline and ongoing exposure monitoring program development and implementation
- Materials risk assessment
- Exposure investigation and reporting
- Statistical analysis of monitoring data
- Indoor air quality assessments
- Local exhaust ventilation assessment
- Auditing and program reviews (from construction sites to Dangerous Goods)
- Advisory – including program management, health surveillance.
- Program gap analysis and auditing.

---

## 2. Health, Safety & Occupational Hygiene

### Services at your service

#### **Comprehensive support for almost any contingency.**

- Real-time monitoring programs with cloud-based data solutions
- Biological, chemical, and physical hazards, such as dusts, gases, vapour, noise, thermal stress, and vibration
- Testing and validation of controls
- Mould and illicit laboratory investigations
- Human health risk assessments
- Noise immission assessments
- Respiratory face mask fit testing
- Potable water assessment.

---

### The Helia EHS advantage

#### **We're constantly working to sharpen our edge for you at Helia EHS.**

- Certified occupational hygienists and members of the Australian Institute of Occupational Hygienists
- An experienced team, including some members with over 25 years' experience
- Multi-disciplined staff with a wide and deep sector knowledge across mining, construction, energy, chemical, oil and gas, pharmaceuticals, smelting, aviation, and manufacturing.
- Helia EHS, invests in staff training to ensure our consultants are at the forefront of change in health and hygiene.

### 3. Contaminated Land Management Solutions

Contaminated land can cause a wide range of consequences for the environment around it, as well as economic and social impacts.

So, it's critical to have an environmental consultancy perform the proper assessment of the land in order to meet your compliance obligations.

**Our services include:**

- Soil, groundwater, surface water and soil vapour assessments across varying levels
- Contaminated land management including remediation and monitoring
- Vapour intrusion and Indoor and ambient air quality testing
- Landfill gas assessments
- Environmental Management Plans
- Waste classifications.

### 3. Contaminated Land Management Solutions

#### Qualified for your success

Helia EHS is a comprehensively qualified environmental consultancy.

Our flexible team includes Certified Environmental Practitioners (CEnvP) who are members of the Australian Contaminated Land Consultants Association (ACLCA), Australasian Land and Groundwater Association (ALGA) and the Environment Institute of Australian and New Zealand (EIANZ).

We all have long-term experience with government bodies and a variety of panel arrangements. We've also worked for larger international consultancies, putting corporate knowhow at your disposal – without the baggage of bureaucracy.

#### Services you can count on

Count on us to combine high level technical support with flexible personal service to resolve your contaminated land issues. Our Contaminated Land Management (CLM) services include:

- Preliminary and Detailed Site Investigations for Contamination
  - Soil
  - Groundwater
  - Soil Vapour
  - Landfill gas
- Risk Assessments
- Due Diligence Assessments for Property Transactions
- Environmental Management Plans
- Waste Management
- Remediation
- EPA and Regulatory Compliance
- Acid Sulphate Soil Assessment and Management
- Hydrogeological Assessments
- Ongoing Environmental Monitoring.

## 4. Asbestos & Hazardous Material

We provide practical advice for the management of asbestos with services including:

### **Asbestos testing.**

Asbestos checks are required when undertaking demolition or refurbishment projects. Our licensed asbestos assessors will answer all your testing procedure questions.

### **Asbestos Risk Register - Asbestos risk assessments and registers.**

A person conducting a business or undertaking (PCBU) is required to maintain a register that identifies and assesses the risk associated with asbestos-containing materials.

### **Refurbishment and Demolition Asbestos Assessments.**

An intrusive site assessment must be conducted before any refurbishment or demolition works begins. These assessments are required for work that is outside normal occupation and maintenance of a site.

### **Asbestos Management Plans and Asbestos Abatement.**

An Asbestos Management Plan is a site-specific document describing the procedures to be followed when asbestos is sampled or assumed present. Asbestos removal legislation differs across Australia. We'll help you comply with your abatement laws.

---

## 4. Asbestos & Hazardous Materials

### **Asbestos Air Monitoring.**

Asbestos air monitoring confirms the asbestos controls in place are working and the asbestos exposure risks are controlled to protect the health of your workforce or the general public.

### **Asbestos in Soil.**

We'll help you manage asbestos contaminated soil during removal, storage, transport and remediation.

### **Asbestos Clearance Inspections.**

A satisfactory visual clearance inspection (and in some cases, paraoccupational air monitoring) must be completed before staff and the public can occupy the work area following the removal or remediation of asbestos. We can arrange this for you and ensure the inspection is confirmed by a written clearance certificate.

---

## Cover your people, property and community

### **Hazardous Building Materials Due Diligence.**

Helia EHS offers Hazardous Building Materials (HBMS) assessments to meet legal occupational, health and safety (OHS) or work health and safety (WHS) requirements (depending on your Australian jurisdiction). A HBMS assessment helps locate problem areas that could impact employees, other building occupants and the environment.
